# The Most Immersive Techno-Cultural Fest!

**Introspection is at the core of this nation's living culture and traditions.**

The ingrained cultural qualities of the Indian youth enable them to adapt and evolve to whatever they need to deal with; this generation knows technology because they were born with it. Every tradition, with its activities, is a philosophy toward one's individual growth, inseparable from the tools of technology.

This inherent quality of looking within oneself and questioning one's surroundings in order to be aware has always been the ideology of the Indian educational system. The culturally and technologically aware persona of a student should begin within her or him as an individual in order to contribute to this nation and to this planet.

**It needs to start within...**
